Sustainability Data Services

What We Provide

- Data and analytical services to quantify the impacts and benefits of your sustainability programs
- Application of global best practices and standards (e.g., ISO 14064) to collect and analyze data, and understand and explain data gaps
- Advanced communication skills, to help you decipher the complexities of sustainability reporting and meet your sustainability communication goals
- Support for your teams in order to build your capacity to address sustainability challenges

How You Will Benefit

- Learn essential processes and gain valuable tools to establish and maintain sustainable corporate management
- Apply key performance indicators and metrics to manage your organization’s sustainability performance
- Gain quantitative understanding of your sustainability impacts, allowing you to effectively communicate the sustainability efforts of your organization to key stakeholders
- Establish rigorous, quantitative, and achievable goals based on an accurate picture of your current situation

Our key services are strategy consulting, sustainability data management, communications, and program management.

We develop clear and customized solutions for sustainable corporate management that are both practical and performance-oriented.

Our team has a depth of expertise, analytical capability, and dedication to quality, which drives success in our clients’ projects.

Our high level of service is based upon trust, service promoting quality, and attention to the needs of our customers. Nothing demonstrates this better than our high client retention rate and our growing client base.

Since 2001 we have worked with more than 70 organizations worldwide.

The Importance of Sustainability Data

Why are sustainability metrics important?
Shareholders, customers, employees, and other stakeholders are increasingly asking companies for a more complete picture of their performance, beyond just financial data. Documenting environmental, social, and other sustainability-related impacts of operations, value chains, and product lifecycles is becoming an expected part of corporate strategy, programs, and reporting. Simply talking about sustainability is no longer a “nice-to-have” for many companies; it is now an integral part of business strategy.

However, rigorous approaches are needed in order to measure environmental and social performance accurately. Quantitative analysis is key to integrating sustainability into every level of strategic and operational management – just like financial performance.

What are the benefits of managing sustainability data?
Collecting data, calculating impacts, and establishing meaningful performance goals equip your company to successfully integrate sustainability into its business model and significantly improve your competitive advantage.

What is involved?
Whether calculating or verifying your carbon footprint according to the ISO 14064 standard, deploying easy-to-use systems to collect sustainability data from across your organization, or applying best practice KPIs to measure sustainability performance, our team offers you a full range of products and services to meet your sustainability goals.

Our Services

Based on your unique needs, we are ready to support you with our easily deployed tools or tailor-made solutions.

Clients Trust Our Expertise

For the past 12 years, we have helped our clients address a wide variety of sustainability-related data challenges. The Sustainserv team includes advanced degree scientists and engineers with international experience and extensive expertise.
